Description:

This product was completely reworked and now contains the newest fuel cells for educational purposes. Together with the already established PEM-fuel cells and the components of a complete solar-hydrogen cycle (electrolyzer, PEM fuel cell and solar module), this product represents the most comprehensive fuel cell experimentation system on the educational market.
The electrical consumer (motor) allows for realistic and demonstrative experiments. Highly didactical instruction manuals complete the product.
leXsolar-H2 Large can be used in physics and chemistry class as well as in technology class.
The product can be expanded with two additional PEM-fuel cells to illustrate the stacking of fuel cells. The expansion ethanol-fuel cell demonstrates a second fuel cell technology.

Specifications extras needed:

9100-05 PowerModule:
The PowerModule is a compact, robust and easy-to-use power supply for experiments. The voltage can be varied incrementally in 0.5V steps from 0 to 12V. It supplies up to 24W output power!
With the acoustic feedback during operation and the voltage indicator by LEDs it is simple and intuitive for the user. With only 70g it is the most lightweigt power supply of its power class. Due to the design as leXsolar plug-in module it is fully compatible with all leXsolar experiments. However, it can also be used in other setups with standard 4mm-connectors.

With software control* continuous variable voltages - even time-dependent - can be realized.

Technical data:

Output voltage 0-12V DC
Maximum current 2A
Maximum output power 24W
Automatic overcurrent detection
Voltage variation in 0.5V steps (manually) or continuous (with software* via USB-Connect* or Wireless-Connect*)
Accuracy: +-0.15V
Contacts: 4mm standard connectors and compatible to leXsolar main board
Input voltage 110-230V AC 50-60Hz
Adaptors for all common sockets included
Weight: 70g (+180g included wall power supply)
RiSU conform
